

IGLOO

The EcoSmart Igloo is designed with a futuristic appeal to enhance any contemporary décor. It's distinctive and original, featuring a toughened glass surround that conveys a 'disappearing' effect.

A stainless steel bench is suspended between the glass surround, and this unique form allows the flame to 'dance' in many directions off the reflective glass panels, generating ambience and warmth and ensuring a stunning centrepiece.

Created as a portable work of art, the Igloo's sleek, minimalist lines add an element of chic to residential units, apartments, houses, and commercial premises including offices, bars and restaurants.

Fueled by Bioethanol - an environmentally friendly, renewable energy - the Igloo, like the rest of the Designer Range, is clean and green.
